

After listening the news of Professor Rick's death, my memory welled up in my mind, and I couldn't calm down for a long time. There are a lot of things that I want to say, which could be full of thoughts and feelings.

I am very grateful to Professor Frederic Troy II for his cultivation and care during my graduate and doctoral studies, enabling me to enter science and grow up on the road of science. From the topic selection of the research paper, experimental design, to the writing of the paper, all permeate the painstaking efforts of a teacher. During the years of study and life, Rick's profound knowledge, rigorous academic attitude, noble ethics and selfless working spirit have not only deeply affected me, but also become a model for my future study and work.

Here, I would like to extend the highest respect and the most heartfelt thanks to Professor Frederic Troy II!
